Getting Started (LINUX)

1. Clone this repo:

```
git clone https://github.com/Soham-Metha/virex.git cd virex/
```

2. Build the project (requires sudo):

```
./install.sh
```

3. Run an example program:

```
cd ./examples/SASM/
virex
```

If the **TUI doesn't render properly**, try adjusting your **terminal font size**.

If that doesn't help, you can tweak layout values in **src/VM/vm_tui.c::CreateWindows()**. The constants used are defined as **percentages** of the screen dimensions.

P.S. **kitty terminal** config, and font used, are available in /tools

4. Inside VIREX, do the following:

- Select "Run SASM/ORIN command with custom flags"
- Enter the following command:

```
-i helloWorld.sasm -I ./ -o tmp.sm
```

use **Arrow keys** for navigation in menu.

- Select "SASM build and exec" by pressing 'a'
- Enter the output filename (tmp.sm)

5. Activate the syntax highlighter in VS Code

- Open VS Code
- Press Ctrl + Shift + P
- Type: Preferences: Color Theme
- Select: Palenight+sasm

Open any . sasm file in vs code to see the syntax highlighter at work!
